

 **XLASE** PLUS
resurfacing peel

RejuvE

Rejuvenation

Xlase Resurfacing Facial Rejuvenation

Ideal for:

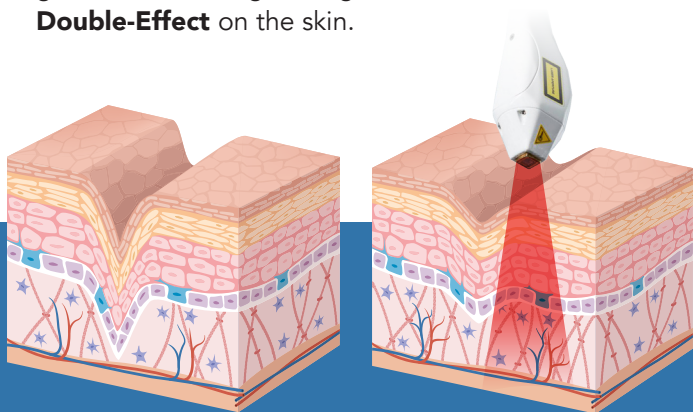

- Skin Laxicity
- Facial Lines & Wrinkles
- Age spots & Uneven Skin color
- Red Veins

Xlase Resurfacing Peel and Diode Laser are able to treat the deep and superficial layers of the skin being highly effective for the treatment of these problem areas.

How does Diode Laser Rejuvenation work?

The Mandelic Acid Resurfacing Peel promotes cell renewal on the epidermis and stimulates the formation of collagen, fibres in the dermis. It disrupts the cohesion between dead cells, detaching them from the skin.

At the same time Diode Laser is able to penetrate into deep layers of the skin stimulating collagen growth and skin tightening, create a **Double-Effect** on the skin.

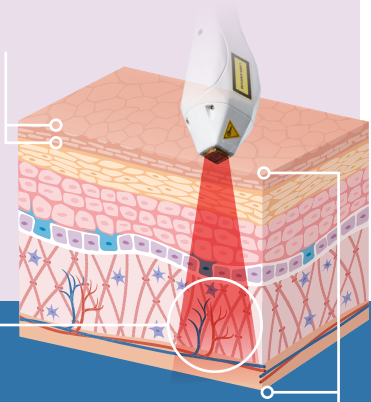

Xlase Resurfacing Peel Procedure

- Active Cleanser
- Face Crystal Aluminium Peel
- Skin Workout gravitational massage
- Xlase Resurfacing Diode Laser
